

SUBAIR OFFERS COMPLIMENTARY GOLF COURSE MOISTURE ANALYSIS
Company Representatives Available in Booth 930 at Golf Industry Show

Graniteville, SC (Jan. 31, 2019) -- SubAir Systems, the leading designer, developer, and manufacturer of subsurface aeration and moisture management systems, has unveiled an exclusive offer available only at the upcoming Golf Industry Show (GIS) in San Diego.

Purchasers can save \$1000 or more on a SubAir golf system or up to \$350 off the regular price of TurfBreeze™ Fans with orders placed at GIS or quoted through February 28, 2019. Installation or delivery locations must be within the 48 contiguous U.S. states.

Additionally, any golf course manager interested in either product will receive a complimentary site visit and soil moisture analysis, including a written progressive installation plan for future golf course improvements.

Company representatives will be at booth 930 and available to discuss how golf courses and greens may be improved with superior air movement and moisture control.

SubAir Systems support the overall health of the turf, virtually eliminating diseases while maintaining the continuous, consistent growth of deep rooted, resilient, healthy green grass.

With in-ground and above-ground installation options, a SubAir System benefits all types of grasses in most climates.

The company's TurfBreeze™ fans reduce heat stress on natural turf and can increase grass transpiration, cooling the plant internally and keeping it healthier overall. These 59- and 62-inch fans circulate air and promote turf health, particularly on shaded turf areas. Fan placement generates preferred oscillation patterns and creates all-important air movement. This much-needed impact reduces humidity and decreases temperatures.

For additional information on SubAir Systems, access the web site at www.subairsystems.com.
